Title of Project Study: GARBAGE-GUARD: DEVELOPMENT OF COMPUTER VISION FOR CREEKS GARBAGE DETECTION USING CONVOLUTIONAL NEURAL NETWORK

Course/Section: _____

Name of Rater: JONEL R. MACALISANG (Adviser) **Date: November 11, 2026**

PROJECT PROTOTYPE RUBRIC

	1	2	3	4	5	Rating
Depth of Design Consideration	The design is shallow. There is no basis for the design presented.	The design lacks the depth of critical thinking. The proposed design is mediocre. It lacks justification from standards and related literature.	The proposed design is promising. There is an attempt to justify the design with some standards but needs further analysis.	The proposed design is feasible to be implemented. Most of the design considerations are anchored on standards and related literature.	Realistic and highly feasible design. Design is based on comprehensive literature, related study and standards	
Originality and creativity	The project prototype is mediocre. No innovation is seen in the design.	There is an attempt to create something novel, however not thoroughly implemented.	There are few manifestations of innovation and creativity, although could still be improved.	The design of the project is well-thought. Several features manifest creativity and innovation.	The design of the project excellently reflects artistic value and innovation. The group thinks outside the box.	
Workmanship	The project prototype is far different from the working drawing. It is not well constructed.	The project prototype manifests some deviations from the working drawing. Most parts need further refinement.	The project prototype is constructed following the working drawing although some deviations are evident. Some components need further refinement.	The project prototype is aesthetically pleasing. Majority of the components are well-constructed. Most of the working drawings were executed.	The project prototype is excellently done. All components are well-crafted. The working drawings were followed in every detail.	
Communicating the Design and Group collaboration	Lacks group cooperation. The group responds poorly to the questions being asked. No attempt to integrate answers to class learning.	Only a few are active in answering the questions. The explanation lacks clarity and questions posed to the group are not thoroughly answered.	The members are present although some have more contribution than the others. Explains some concepts although it lacks clarity at some point.	Most of the group members are active during the presentation. Explains the concept of the mock-up and answers most of the questions asked and relates it to the class learning.	Group participation reflected in the final output. The group explains the concept of the mock-up clearly and with conviction. Thoroughly responds to questions and integrates learning from the subject.
